## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-19, drawn to a method of making a thyristor, classified in class 438, subclass 133.
  - II. Claims 20-38, drawn to a method of fabrication, classified in class 438, subclass 142.
  - III. Claims 39-50, drawn to a method of making a memory device, classified in class 438, subclass 243.
  - IV. Claims 51-56, drawn to a method of making a thin capacitively coupled thyristor memory device, classified in class 438, subclass 150.
  - V. Claims 57-73, drawn to a method of making a semiconductor device, classified in class 438, subclass 342.
  - VI. Claims 74-78, drawn to a memory device, classified in class 257, subclass 96.
  - VII. Claims 79-84, drawn to a system, classified in class 257, subclass 133.
  - VIII. Claims 85-101, drawn to a semiconductor device, classified in class 257, subclass 107.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the

Art Unit: 2814

different inventions have different effects because each method may be resulted in a different device.

3. Inventions VI and VIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation such that Group VI may be used as an emitter while Group VIII may be used as a switching device.

4. Inventions VII and VI are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require to have a "T" structure replacement gate. The subcombination has separate utility such as a resistor.
